Memorandum

DATE : April 8, 1980  
TO : Tom Rockey  
FROM : L. Joe Miller *[Signature]*  
SUBJECT : PCB Capacitors Disposal

In the attached March 25 memo, Peter Willing recommends that the department consider an accelerated PCB capacitor disposal program. It is my understanding that to initiate such a program, it would have to be included as a CIP. I would appreciate your reviewing his proposal, discussing the financial impact, the costs to the department, as well as the benefits to be received, and jot down your recommendation as to whether the department should proceed.

Recognizing that it might take some time to work out the figures, I look forward to seeing your response by the end of April.
